AWARDS & RECOGNITION

Rockstar Award

Agilysys

High ownership & end-to-end delivery of Tax Exemption Reconciliation feature in Stay.

Super Squad Award

Agilysys

Recognized for cross-functional collaboration on Share Reservation feature in Stay.

STRENGTHS

High Ownership

End-to-end accountability from concept to reliable production delivery

Analytical Problem Solver

Rapid root-cause diagnosis, sharp debugging, and robust edge-case handling

Collaborative Team Player

Proactive communication across product, QA, and cross-functional teams

Attention to Detail

Committed to pixel-perfect UI execution, clean code, and user experience

SUMMARY

Results-driven Frontend Developer with 2.5+ years of experience in building and enhancing enterprise web applications using Angular, TypeScript, and JavaScript. Experienced in developing user-focused interfaces, resolving complex UI issues, implementing product features, and delivering reliable solutions for large-scale applications. Recognized with performance and team awards for technical contributions and successful delivery. Adaptable to emerging technologies with hands-on experience in AI-assisted development and a strong interest in integrating AI into modern software applications.

EXPERIENCE

Associate Software Analyst

Agilysys Technologies India Pvt. Ltd. | Chennai

March 2025 – Present

- Develop and maintain front-end features in Angular 16 and TypeScript as part of a cross-functional product team.
- Diagnose and fix reported bugs and UI defects, keeping the product stable and consistent across browsers.
- Refactor complex Angular/TypeScript logic and improve component maintainability using AI-assisted workflows.

UI Developer

Spritle Software | Chennai

May 2024 – Feb 2025

- Built responsive, interactive web applications using React.js, HTML, CSS, Tailwind CSS, and JavaScript.
- Improved page performance by optimizing assets and reducing load times.
- Converted Figma designs into pixel-accurate UI components, working closely with designers and backend developers.

PROJECTS

STAY: Marriott Hotels Booking Platform

Angular 16, TypeScript, JavaScript, Tailwind CSS | Agilysys IDC

- Front-end developer on an enterprise hospitality platform that handles the complete guest journey for Marriott Hotels, from search to checkout.
- Own front-end features for the BRM module, turning hotel-management business rules into reusable, production-ready Angular components.
- Work in a large-scale Angular codebase with cross-functional teams, shipping features to a live product.
- Developed bug-free features and maintained high scalability across application modules.

Cookio – Recipe Hub Web Application

React.js, JavaScript, Tailwind CSS, REST API – Axios

[Live: cookio-recipehub.netlify.app](#)

- Built a responsive recipe discovery application with real-time dish search, cuisine filtering, and interactive preparation guides.
- Integrated REST APIs for automated recipe data fetching, nutritional information, and responsive layout performance.
- Implemented recipe bookmarking and local storage persistence, enabling users to curate and save favorite dishes offline.
- Engineered modular UI components with Tailwind CSS, ensuring fast asset loading and seamless mobile responsiveness.

AI COLLABORATION & WORKFLOWS

- Component development:** Use GitHub Copilot, Claude, and Antigravity to prototype Angular components and refactor TypeScript logic, then review and adapt the output to project standards.
- Debugging:** Give AI tools the error context, expected behavior, and relevant code to isolate the cause of edge-case UI defects faster.
- Testing:** Generate unit test scaffolding for new components, then add edge cases manually.
- Responsive layouts:** Draft Tailwind/CSS layouts with AI and verify them against breakpoints and cross-browser behavior before committing.
